                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          suffering from transplant rejection, receiving immunosuppressive therapy or massive blood transfusion, exposed to medical devices or experiencing pulmonary dysfunction following heamodial tysis or leukopheresis. It can also be used as prophlyactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antibodies against the derivative can be used to detect or quantify the derivative and modify, e.g. neutralise, its activity in vivo. N.B. Sequence not given in specification, but constructed using the wild type sequence given on pages 51-52.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Thribmet, Cys73er, His67Cys, is a C5a receptor antagonist which exhibits no agonist activity. It can be used to treat or prevent C5a mediated diseases or inflammation, e.g. pneumonitis, adult respiratory distress syndrome (ARDS), pulmonary inflammation or injury, post myocardial infarction inflammation, inflammationy howel disease, rheumatoid arthritis, psoriasis, endotoxic shock, sepsis, severe trauma and burns. It can also be used to treat patients
adult respiratory distress syndrome; ARDS; pulmonary; injury; post mycoardial; infarction; inflammatory bowel; endotoxic shock; rheumatoid arthritis; psoriasis; sepsis; transplant rejection; immunosuppressive therapy; blood transfusion; dystunction; haemodialysis; leukopheresis; prophylaxis; reperfusion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence, the human complement C5a derivative 1-67

N.B. Sequence not given in specification, but constructed using the wild type sequence given on pages 51-52. Thirlibet, Cy273cr. Lys68Cys, is a Caracterion antagonist which exhibits no agonist activity. It can be used to treat or prevent C5a mediated diseases or inflammation, e.g. pneumonitis, adult respiratory distress syndrome (ARDS), pulmonary inflammation or injury, post myocardial infarction inflammation, inflammation bowel disease, rheumatoid arthritis, psoriasis, endotoxic shock, sepsis, severe trauma and burns. It can also be used to treat patients suffering from transplant rejection, receiving immunosuppressive therapy or massive blood transfusion, exposed to medical devices or experiencing pulmonary dysfunction following haemodialysis or leukopheresis. It can also be used as a prophylactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as to prevent transplant rejection. Antibodies against the derivative can be used to detect or quantify Human: complement; C5a; derivative; receptor; antagonist; trauma; treatment; prevention; disease; inflammation; pneumonitis; burn; adult respiratory distress syndrome; ARDS; pulmonary; injury; post myocardial; infarction; inflammatory bowel; endotoxic shock; rheumatold arthritis; psoriasis; sepsis; transplant rejection; immunosuppressive therapy; blood transfusion; dysfunction; The present sequence, the human complement C5a derivative 1-68, hacmodialysis; leukopheresis; prophylaxis; repertusion /note= "wild type Cys replaced by Ser" /note- "wild type Lys replaced by Cys" /note= "wild type Thr replaced by Met" Human complement C5a protein derivative analogue 5. It can be used to treat or prevent C5a mediated diseases or inflammation, e.g. pneumonitis, adult respiratory distress syndrome (ARDS), pulmonary inflammation or injury, post myocardial infarction inflammation, inflammatory bowel disease, rheumatoid arthritis, psociasis, endotoxis shock, sepsis, severe trauma and burns. It can also be used to treat patients suffering from transplant rejection, receiving immunosuppressive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  therapy or massive blood transfusion, exposed to medical devices or experiencing pulmonary dysfunction following heemodialysis or leukopheresis. It can also be used as a prophylactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as

respiratory distress syndrome (ARDS), pulmonary inflammation or injury, post myocardial infarction inflammation or disease, rheumatoid arthritis, psoriasis, endotoxic shock, sepsis, severe trauma and burns. It can also be used to treat patients suffering from transplant rejection, receiving immunosuppressive therapy or massive blood transfusion, exposed to medical devices or experiencing pulmonary dysfunction following hacmodialysis or leukopheresis. It can also be used as a prophylactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as to prevent transplant rejection.

Chatibodies against the derivative can be used to detect or quantify the derivative and modify, e.g. neutralise, its activity in vivo.

N.B. Sequence not given in specification, but constructed using the wild type sequence given on pages 51-52.
                                                                                                                                                                                                                                                                                                                                       Gaps

New human complement C5a poly-peptide derivs. - used as C5a receptor antagonists, partic. for treating C5a-mediated diseases and inflammatory conditions
                                                                                                                                                                                                                                                            Suffering from transplant rejection, receiving immunosuppressive therapy or massive blood transfusion, exposed to medical devices or experiencing pulmonary dysfunction, exposed to medical devices or experiencing pulmonary dysfunction following haemodialysis or leukopheresis. It can also be used as a prophylactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as to prevent transplant rejection.

Antibodies against the derivative can be used to detect or quantify the derivative and modify, e.g. neutralise, its activity in vivo.

W.B. Sequence not given in specification, but constructed using the wild type sequence given on pages 51-52.
                                                                                                                                                                                                    injury, post myocardial infarction inflammation, inflammatory bowel disease. Theumatoid arthritis, psoriasis, endotoxic shock, sepsis, severe trauma and burns. It can also be used to treat patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human: complement; C5a; derivative; receptor; antagonist; trauma; treatment; prevention; disease; inflammation; pneumonitis; burn; adult respiratory distress syndrome; AROS; pulmonary; injury; post myocardial; infarction: inflammatory bowel; endotoxic shock; rheumatoria arthritis; psoriasis; sepsis; transplant rejection; immunosuppressive therapy; blood transfusion; dysfunction; haemodialysis; leukopheresis; prophylaxis; reperfusion.
                                                                                                                               ThriGly, Cys27Ser, Gln7ICys, is a Csa receptor antagonist which exhibits no agonist activity. It can be used to treat or prevent C5a mediated diseases or inflammation, e.g. pneumonitis, adult respiratory distress syndrome (ARDS), pulmonary inflammation or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .

                                                                                                                                                                                                                                                                                                                                        Thrighy, cys27Ser, His67Phe, Gla7ICys, is a C5a receptor antagonist which exhibits no agonist activity. It can be used to treat or agonist rectivity. It can be used to treat or adult respiratory distress syndrome (ARDS), pulmonary inflammation or injury, post myocardial infarction inflammation, inflammation or injury, post myocardial infarction inflammation, inflammatory bowel disease, rheumatoid arthritis, psoriasis, endotoxic shock, sepsis, severe trauma and burns. It can also be used to treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             prophylactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as to prevent transplant rejection. Antibodies against the derivative can be used to detect or quantify the derivative and modify, e.g. neutralise, its activity in vivo. N.B. Sequence not given in specification, but constructed using the wild type sequence given on pages 51-52.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; complement; C5a; derivative; receptor; antagonist; trauma; treatment; prevention; disease; inflammation; pneumonitis; burn; adult respiratory distress syndrome; ARDS; pulmonary; injury; post myocardial; infarction; inflammatory bowel; endotoxic shock; rheumatoid arthritis; psoriasis; sepsis; transplant rejection; immunosuppressive therapy; blood transfusion; dysfunction; haemodialysis; leukopheresis; prophylaxis; reperfusion.

Thribact. Cys27Ser, His67Phe, Gln71Cys, is a C5a receptor antagonist which exhibits no agonist activity. It can be used to treat or which exhibits no agonist activity. It can be used to treat or prevent C5a mediated diseases or inflammation. 4.9. pulmonary inflammation or injury, post myocardial infarction inflammation, inflammatory continury, post myocardial infarction inflammation, inflammatory continury, post myocardial infarction inflammation, inflammatory sepsis, severe trauma and burns. It can also be used to treat patients suffering from transplant rejection, receiving immunosuppressive therapy or massive blood transfusion, exposed to medical devices or experiencing pulmonary dysfunction following themediallysis or leukopheresis. It can also be used as a prophylactic, particularly in conditions caused by reperfusion, e.g. reperfusion following ischaemia, and circulatory contact with medical devices, as well as to prevent transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                  New human complement C5a poly-peptide derivs. - used as C5a receptor antagonists, partic, for treating C5a-mediated diseases and

New human complement C5a poly-peptide derivs. - used as C5a receptor aniagonists, partic. for treating C5a-mediated diseases and inflammatory conditions

Example 3; Page -; 93pp; English.

The present sequence, the human complement C5a derivative 1-71,
Thrimet, Cys27Ser, Gln71Cys, is a C5a receptor antagonist which
exhibits no agonist activity. It can be used to treat or prevent
C5a mediated diseases or inflammation, e.g. pneumonitis, adult
respiratory distress syndrome (ARDS), pulmonary inflammation or
injury, post myocardial infarction inflammation, inflammatory bowel
clisease, rheumatoid arthritis, psoriasis, endotoxic shock, sepsis,
severe trauma and burns. It can also be used to treat patients
suffering from transplant rejection, receiving immunosuppressive
therapy or massive blood transfusion, exposed to medical devices
contexperiencing pulmonary dystunction following hacmodialysis or
conditions caused by reperfusion following hacmodialysis or
conditions caused by reperfusion, e.g. reperfusion following
ischaemia, and circulatory contact with medical devices, as well as
to prevent transplant rejection.
Controles against the derivative can be used to detect or quantify
the derivative and modify, e.g. neutralise, its activity in vivo.
N.B. Sequence not given in specification, but constructed using the
wild type sequence given on pages 51-52.

A;Contents: annotation C;Contains two disulfide-linked chains, formed by removal of t (beta and alpha' chains).

C:Comment. Activation of C5 initiates the spontaneous assembly of the late complement is the foundation upon which the membrane attack complex is assembled. C:Comment: C5a has potent spasmogenic and chemotactic activity.

Complement C5 - pig (fragment)

N. Contains : C5a maphylatoxin. C5B

C. Species: Sus scrote domestica (domestic pig)

C. Species: Sus scrote domestica (domestic pig)

C. Species: Sus scrote domestica (domestic pig)

C. Accession: A01268; A26248

R. Gerard. C.: Hugh! T. S. A10-115, 1980

A; Title: Amino acid sequence of the anaphylatoxin from the fifth component of porcine or Accession: A01268; MUID: 80182137

A; Residues: 1-4 GERA

A; Residues: 1-7 GERA

R. Gerard. C.: Hugh! T. S. A. 78, 1833-1837, 1981

A; Residues: 1-7 GERA

A; Residues: 1-7 A; Residues

A; Contents annotation; active region

A; Rooference number: A26247; MUID: 81199549

A; Contents: annotation; active region

A; Rooference number: A26248; MUID: 8184201

A; Residues: A56248; MUID: 8184201

A; Residues: A56248; MUID: 84184201

A; Residues: A56248; MUID: 84184201

A; Residues: 164, E; 66-73 ZIM-

C; Comment: Complement C5 contains two disulfide-linked chains, formed by removal of four (beta and alpha' chains)

C; Comment: Activation of C5 initiates the spontaneous assembly of the late complement cc comment: Activation of C5 initiates the spontaneous assembly of the late complement C; Comment: Activation of C5 initiates the spontaneous assembly of the late complement C; Comment: C5a has potent spasmogenic and chemotactic activity

C; Comment: C5a has potent spasmogenic and chemotactic activity

C; Comment: C5a has potent spasmogenic and chemotactic activity

C; Comment: C5a has potent spasmogenic and complement pathway; cytolysis; glycoprotein; I; F; 1-74/Product: C5a anaphylatoxin status experimental

F; 1-74/Product: C5a anaphylatoxin status experimental

THE ALPHA CHAIN IS A REGULATORY
SUBUNIT (EYSIMILARITY).

SUBUNIT: F-TYPE ATPASSE HAVE 2 COMPONENTS, CF(1) - THE CATALYTIC
CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIVE
SUBUNITS: ALPHA(3), BETA(3), GAMA(1), DELTA(1), EPSILON(1).

HAS THREE MAIN SUBUNITS: A, B AND C (BY SIMILARITY).

- SUBCELLULAR LOCATION: MITOCHONDRIAL INNER MEMBRANE (BY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CITY:
                              Sequence 10, Application US/08299285
Patent No. 5696230
GENERAL INFORMATION:
APPLICANT: Sanderson, Sam D.
APPLICANT: Sherman, Simon A.
APPLICANT: Taylor, Stephen M.
TITLE OF INVENTION: T-EPHEN High Affinity Response-Selective
TITLE OF INVENTION: C-Terminal Analogs of C5a Anaphylatoxin
NUMBER OF SEQUENCES: 37
CORRESPONDENCE ADDRESS:
ADDRESSEE: Dann, Dorfman, Herrell and Skillman
STREET: 1601 Market Street Suite 720
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                  A novel molecular adjuvant has been developed for enhancing an immune response to an immunogen. The molecular adjuvant comprises a targeting ligand, having binding affinity for a characteristic determinant of an antigen presenting cell (APC), the targeting ligand being functionally linked to the immunogen, and so binding of the molecular adjuvant to the APC determinant activates the APC, effecting delivery of the sequence ropresents a specifically claimed formula for a molecular adjuvant, where the immunogen is serum amyloid A. The molecular adjuvant can be used to produce an immune response for protecting against viral and other pathogens or to produce anti-tumour responses. It can also be
                                                                                                                                                                                                                                                                                                    used for the production of antibodies for use as immunodiagnostic and immunotherapeutic agents. The molecular adjuvant is readily taken up and processed by APCs to provide APC-mediated immune responses. It can provide for the production of antibodies against a weakly antigenic or
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Molecular adjuvant; immune response; immunogen; binding affinity; antigen presenting cell; APC; viral pathogen; anti tumour response; antibody; immunodiagnostic; immunotherapeutic; agonist.

response to an immunogen. The molecular adjuvant comprises a targeting ligand, having binding affinity for a characteristic determinant of an antigen presenting cell (APC), the targeting ligand being functionally linked to the immunogen, and so binding of the molecular adjuvant to the APC determinant activates the APC, effecting delivery of the immunogen to an antigen presenting pathway of the APC. The present immunogen to an antigen presenting pathway of the APC. The present sequence represents a specifically claimed targeting ligand and immunogen. The molecular adjuvant can be used to produce an immune produce anti-tumour responses. It can also be used for the production of antibodies for use as immunodaingnostic and immunotherapeutic agents. The molecular adjuvant is readily taken up and processed agents. The molecular adjuvant is readily taken up and processed control of antibodies dgainst a weakly-antigenic or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

ò \$; response to an immunogen. The molecular adjuvant comprises a targeting aligand, having binding affinity for a characteristic determinant of an antigan presenting cell (APC), the targeting ligand being functionally linked to the immunogen, and so binding of the molecular adjuvant to maning a ctivates the APC, effecting delivery of the timmunogen to an antigen presenting pathway of the APC. The present sequence represents a specifically claimed targeting ligand, which is a CSa C-terminal decapeptide agonist. The molecular adjuvant can be used to produce an immune response for protecting against viral and other pathogens or to produce antitumour responses. It can also be used for immunotherapeutic agents. The molecular adjuvant taken up and processed by APCs to provide APC-mediated immune responses. It can approvide for the production of antibodies against a weakly-antigenic or A novel molecular adjuvant has been developed for enhancing an immune Gaps Molecular adjuvant; immune response; immunogen; binding affinity; antigen presenting cell; APC; viral pathogen; anti tumour response; antibody; immunodiagnostic; immunotherapeutic; agonist. response to an immunogen. The molecular adjuvant comprises a targeting ligand, having binding affinity for a characteristic determinant of an antigen presenting cell (APC), the targeting ligand being functionally inked to the immunogen, and so binding of the molecular adjuvant to the APC determinant activates the APC, effecting delivery of the immunogen to an antigen presenting pathway of the APC. The present sequence represents a targeting ligand and immunogen, in which the juxta-membrane epitope of human mucin-1 is positioned toward the carboxyl terminus and the C5a analogue is positioned toward the amino terminus. The molecular adjuvant can be used to produce an immune produce anti-tumour responses. It can also be used for the production of antibodies for use as immunodiagnostic and immunotherapeutic agents. The molecular adjuvant is readily taken up and processed by APCs to provide APC-mediated immune responses. It can provide contribution of antibodies against a weakly-antigenic or

The present invention relates to an artibody specific for the present sequence. The C5a artibody can be used in a therapeutic composition, which is useful for treating a subject suffering from bacterial infection, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Compositions for treating blood-borne and toxin mediated diseases and treatment of sepsis in humans and other animals comprises ant1-C5a antibodies generated against C-terminal truncated C5a peptides

The present sequence is a C-terminal truncated C5a peptide fragment. The present invention relates to an antibody specific for the present sequence. The C5a-antibody can be used in a therapeutic composition, which is useful for treating a subject suffering from bacterial infection, e.g. sinusitis, meningitis, respiratory, gastrointestinal or urinary tract infections or infections in wounds. In addition, the C5a antibody can be used for treating sepsis. C5a is also known as
                                                                                                                                                                                                                                                                                                                                      meningitis; respiratory; gastrointestinal; urinary tract infection; wound; anaphylatoxin; sepsis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          meningitis; respiratory; gastrointestinal; urinary tract infection; wound; anaphylatoxin; sepsis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Compositions for treating blood-borne and toxin mediated diseases treatment of sepsis in humans and other animals comprises anti-C5a antibodies generated against C-terminal truncated C5a peptides

The present invention relates to an antibody specific for the present sequence. The C5a antibody can be used in a therapeutic composition, which is useful for treating a subject suffering from bacterial infection, e.g. sinusitis, meningitis, respiratory, gastrointestinal or urinary tract infections or infections in wounds. In addition, the C5a antibody can be used for treating sepsis. C5a is also known as
sinusitis, meningitis, respiratory, gastrointestinal or urinary tract
infections or infections in wounds. In addition, the C5a antibody can
be used for treating sepsis. C5a is also known as anaphylatoxin.

                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                        The present sequence is a C-terminal truncated C5a peptide fragment. The present invention relates to an antibody specific for the present sequence. The C5a-antibody can be used in a therapeutic composition, which is useful for treating a subject suffering from bacterial infection, e.g. sinusitis, meningitis, respiratory, gastrointestinal or urinary tract infections or infections in wounds. In addition, the C5a antibody can be used for treating sepsis. C5a is also known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Compositions for treating blood-borne and toxin mediated diseases and treatment of sepsis in humans and other animals comprises anti-C5a

                                      The present sequence is a C-terminal truncated C5a peptide fragment. The present invention relates to an antibody specific for the present sequence. The C5a antibody can be used in a therapeutic composition, which is useful for treating a subject suffering from bacterial infection, e.g. sinusitis, meningitis, respiratory, gastrointestinal or uninary tract infections or infections: in wounds. In addition, the C5a antibody can be used for treating sepsis. C5a is also known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is a C-terminal truncated C5a peptide fragment. The present sequence is a C-terminal truncated C5a peptide fragment. The present invention relates to an antibody specific for the present sequence. The C5a-antibody can be used in a therapeutic composition, which is useful for treating a subject suffering from bacterial infection, e.g. sinusitis, meningitis, respiratory, gastrointestinal or urinary tract infections or infections in wounds. In addition, the C5a antibody can be used for treating sepsis. C5a is also known as
                                                                        C5a; complement; antibody; bacterial infection; sinusitis; meningitis; respiratory; gastrointestinal; urinary tract infection; wound; anaphylatoxin; sepsis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   meningitis; respiratory; gastrointestinal; urinary tract infection; wound; anaphylatoxin; sepsis.
                                                                                                                                                                                                                                                                                                                                                                                                                                   Compositions for treating blood-borne and toxin mediated diseases a treatment of sepsis in humans and other animals comprises anti-C5a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is a peptide fragment of human complement component CSa (the full-length sequence is given in AAB74053). The present invention relates to an antibody specific for the present sequence. The C5a-antibody can be used in a therapeutic composition, which is useful for treating a subject suffering from bacterial infection, e.g. sinusitis, meningitis, respiratory, gastrointestinal or urinary tract infections or infections in wounds. In addition, the C5a antibody can be used for treating sepsis. C5a is also known as anaphylatoxin.

The present sequence is a C-terminal truncated C5a peptide fragment. The present invention relates to an antibody specific for the present sequence. The C5a-antibody can be used in a therapeutic composition, which is useful for treating a subject suffering from bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    infection, e.g. sinusitis, meningitis, respiratory, gastrointestinal or
urinary tract infections or infections in wounds. In addition, the C5a
antibody can be used for treating sepsis. C5a is also known as
sequence. The C5a-antibody can be used in a therapeutic composition, which is useful for treating a subject suffering from bacterial infection, e.g. sinusitis, meningitis, respiratory, gastrointestinal or urinary tract infections or infections in wounds. In addition, the C5a antibody can be used for treating sepsis. C5a is also known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  C5a; complement; antibody; bacterial infection; sinusitis;
